

Ksenia Yakubova

Java/Kotlin Backend Developer

CONTACTS

Phone: +7 910 720 80 88

Email: kcen.yakubowa2013@gmail.com

Telegram: @ginger_sun7

GitHub: @ksenia274

VK: vk.com/id_ksusha_yakubova

Location: Saint Petersburg, Russia

EDUCATION

St Petersburg State University 2026

BSc, Software Engineering

Faculty of Mathematics and Computer Science

LANGUAGES

English — B2

Russian — Native

SKILLS

Languages:

Java, Kotlin, Python, SQL, C++, Haskell

Frameworks & technologies:

Spring, Ktor, gRPC, REST API, JUnit, Mockito

Databases:

PostgreSQL, ClickHouse, OpenSearch

Tools:

Git, Docker, Kubernetes, Terraform, GitHub Actions, IntelliJ IDEA

Coursework:

OOP, algorithms and data structures, computer networks, ML, functional programming

ACHIEVEMENTS

Yandex Cup finalist,

Analytics track

2024

Yandex Education Student Camp:

Alice and Smart Devices

2026

ABOUT ME

I have experience teaching mathematics and computer science. I get up to speed in new domains quickly, structure complex problems well and communicate easily within a team.

EXPERIENCE

Yandex Market

07/2025 – 10/2025

Backend Developer Intern (Java/Kotlin)

- Optimized data pipelines and internal metrics, improving the stability of data processing
- Implemented new REST endpoints for exporting data with filtering across a large number of entities
- Fixed bugs in sorting and filtering: correct query handling and data updates
- Refactored the codebase, handled tech-debt and infrastructure tasks

Yandex Cloud

12/2024 – 05/2025

Backend Developer Intern (Java)

- Developed and tested new functionality, worked with gRPC APIs
- Worked with databases: PostgreSQL, OpenSearch, ClickHouse
- Deployed services to staging and production environments with Terraform

PROJECTS

Fair Vehicle Routing Problem

github.com/ksenia274/algorithms-for-VRP-with-constraints

Bachelor's thesis

- Designed and implemented three approaches to route optimization based on Hybrid Genetic Search (HGS)
- Modified the C++ core of PyVRP and its Python API to support adaptive optimization
- Built the infrastructure for benchmarking the algorithms, computing quality metrics and analyzing results

Stack: Python, C++, PyVRP

SPbU Interns — healthcare platform

github.com/spbu-interns/product

Tech Lead, Backend; team of 6

A platform for patients, doctors and clinics: appointments, time slots, medical records.

- Designed the platform architecture and owned the technical decisions
- Built the REST API in Ktor: authentication, CRUD, filters, PDF generation of medical records
- Set up CI/CD and reviewed the team's pull requests

Stack: Kotlin, Ktor, PostgreSQL, Compose Multiplatform, Gradle

Lyra — Android messenger for local networks

github.com/veronlkkkaa/StudCamp

Team Lead; Yandex Education Student Camp; team of 3

An offline Wi-Fi messenger: the host runs the server, clients connect over mDNS.

- Designed the host-client architecture (WebSockets + HTTP + NSD)
- Ensured network stability: grace period, WifiLock, MulticastLock
- Coordinated the team and implemented media transfer with previews

Stack: Kotlin, Compose, Ktor, WebSockets, NSD, Gradle
